Vital Statistics

367,500-gallon underground propane storage facility and rail terminal.

Two 400-ft. rail sidings, facilitating eight rail cars total.

One rail tower capable of off-loading two rail cars simultaneously. Average off-load time per car is four (4) hours.

Two ground transportation loading stations. Accuload III metering system, delivering 450-gallons a minute to each side of the loading rack.

One transport unloading station, allowing ground transportation to load into the facility, when necessary.

Two Bobtail loading stations, allowing smaller residential and commercial delivery vehicles (Bobtails) to load directly from storage for local delivery.
