**Color:** Black, powder coat

**Assembly:** Two-piece, some assembly required

**Shipping:** UPS Ground

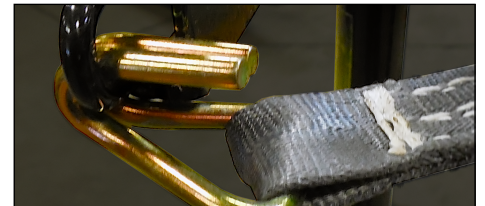

The RTC33-Scoop makes each stop with multiple cylinders more efficient and less challenging for the delivery person.

This 33 lb. motor fuel cylinder dolly is a simple two-wheel hand cart that easily and safely transports four full, stacked, steel or aluminum cylinders. This cart can also handle six, stacked, 20 lb. cylinders

To conserve space in a gas house, or on the bed of a cylinder delivery body, motor fuel cylinders are generally stacked in banks of two high. To use this cart, simply roll up to any stack, positioning the unique fork design between the cylinders and pull back on the handle. The tanks automatically orient themselves on the cart.

Back away from the stack, and secure the cylinders using the 2, 10,000 lbs. breaking strength, nylon straps.
